

SacredCode Shannon

Experimental tools for information analysis of text sequences.

Documented concept · Filing not verified

Buyer need

Publishers and archives need reliable corpus integrity and normalisation.

Available evidence

Text-formalisation research is available; no specific product has been validated in this review.

What remains to be demonstrated

A distinct technical benefit and a comparative test using an authorised corpus.

SacredCode Shannon

Market and alternatives

Unicode normalisation is already standardised. Entropy alone does not replace a cryptographic hash.

Potential buyers

Libraries, publishers and digital archives

Next fundable milestone

Validate a document-integrity use case and its value to a publisher.

Decision criterion

Proceed with corpus-related services. Revisit patent protection after establishing a technical result.

Targeted, non-exhaustive research. Commercial conclusions are hypotheses. These sources establish no acquisition interest in DreamNova.

Validation budget

SacredCode Shannon

\$3,421 – \$9,123

30 to 60 days, initial feasibility

Planning assumptions, not quotations or valuations. The bounds are two spending scenarios, not a statistical confidence interval. Further investment depends on milestone results.

Engineering

Low scenario	\$2,053
High scenario	\$5,702

Computing, hardware or external laboratory

Low scenario	\$855
High scenario	\$2,053

Preliminary IP review

Low scenario	\$513
High scenario	\$1,368

Planning assumption, not a quotation or an asset valuation. Includes preliminary IP review; excludes drafting and filing, a full freedom-to-operate assessment, tax, industrialisation and regulatory studies. Deduct any services that overlap with a future filing quotation.

Public sources

[Unicode — normalisation standard UAX #15](#)

Planning amounts are expressed in US dollars using the ECB reference rates dated 25 September 2026. These are indicative conversions, not bank transaction rates or supplier quotations.
