

AETHER-Q

Exploratory research into physical detection methods.

Early exploratory research · Filing not verified

Buyer need

Sensing laboratories are potential research partners; an industrial need remains to be defined.

Available evidence

A concept dossier exists; no physical device was observed.

What remains to be demonstrated

Scientific validation and a defined use case.

AETHER-Q

Market and alternatives

Real quantum sensors have defined observables and explicit noise budgets.

Potential buyers

Sensing laboratories and specialist industrial partners

Next fundable milestone

Commission an expert feasibility review before development.

Decision criterion

Do not announce equipment performance or sales at this stage.

Targeted, non-exhaustive research. Commercial conclusions are hypotheses. These sources establish no acquisition interest in DreamNova.

Validation budget

AETHER-Q

\$3,421 – \$11,403

30 to 60 days, initial feasibility

Planning assumptions, not quotations or valuations. The bounds are two spending scenarios, not a statistical confidence interval. Further investment depends on milestone results.

Engineering

Low scenario	\$2,053
High scenario	\$6,842

Computing, hardware or external laboratory

Low scenario	\$855
High scenario	\$2,851

Preliminary IP review

Low scenario	\$513
High scenario	\$1,710

Planning assumption, not a quotation or an asset valuation. Includes preliminary IP review; excludes drafting and filing, a full freedom-to-operate assessment, tax, industrialisation and regulatory studies. Deduct any services that overlap with a future filing quotation.

Public sources

[NIST — quantum sensing](#)

[WIPO — national-security restrictions](#)

Planning amounts are expressed in US dollars using the ECB reference rates dated 25 September 2026. These are indicative conversions, not bank transaction rates or supplier quotations.
